Allégro® HGH Human Growth Hormone Transient Gene Expression System

AN ADVANCED METHOD. The control of gene expression can be investigated based on the simple immunological detection of hGH secreted by cells transiently transfected with plasmids containing regulatory regions of interest fused to the structural region of the hGH gene. When such plasmids are transfected into mammalian cells, hGH is secreted into the medium, and small aliquots are then assayed for hGH levels. For a wide variety of promoters and cell types, levels of secreted hGH are directly proportional to mRNA levels, providing a convenient approach to monitoring promoter activity.

FAST: The Allégro HGH assay takes minutes to set up. Quantitative results are obtained after only 90 minutes of incubation time—no need to wait for an autoradiograph.

SENSITIVE: In transfected mouse fibroblasts, less than 10 nanograms of the thymidine kinase/hGH fusion plasmid pTKGH yields a readily detectable hGH signal after transfection. In comparison, ten-fold more of a thymidine kinase/CAT plasmid was required to yield a detectable signal.

Now a fast, sensitive and reproducible assessment of transient gene expression... without cell destruction.

VERSATILE: Since the cells are not destroyed, the hGH system is well-suited for use as an internal control in tandem with other reporter genes... eliminating troublesome plate-to-plate variability. Also, the hGH mRNA is easily detected by standard techniques.

PLASMIDS PROVIDED WITH THE ALLEGRO HGH TRANSIENT GENE EXPRESSION SYSTEM

pØGH: A vector containing the hGH structural sequences inserted adjacent to a polylinker—for insertion of desired promoter.

pTKGH: The thymidine kinase/hGH fusion plasmid—for insertion of desired regulatory elements.

pXGHS: The mouse metallothionein-I/hGH fusion plasmid—a useful internal control for transfection efficiency.

This product utilizes radioactive iodine, \(^{125}\text{I}\).

THE CELL CYCLE

Edited by
Robert Brooks, Peter Fantes, Tim Hunt, Denys Wheatley

Casebound, approx 300pp. $60 (£40) ISBN 0 948601 23 X

Contents:

Maturation promoting factor, Histone H1 kinase and the timing of mitosis.
Reports on yeast and higher eukaryote cycles from Nurse, Beach, Hyams, Reed, Doree, Maller and Co-workers.

The role of cyclin synthesis and destruction in the cell cycle.
Reports from the Murray, Hunt, Whitaker, Cross and Karsenti laboratories.

The role of DNA damage and DNA synthesis in the control of the cell cycle.
Reports from the Hartwell, Newport, Stillman, Roberts, Laskey and Hutchison groups.

Chromosomes, Centrosomes, Centromeres and Kinetochores.
Reports from Yanagida, Bloom, Hurt, Sluder and Glover.

The Cell Cycle can be ordered below or is free with a 1989 subscription to:

JOURNAL OF CELL SCIENCE

A major international journal of cell biology

12 monthly issues plus annual supplements (2 in 1991)

1991 subscriptions: Libraries – $870 (USA), £550 (Japan), £500 (rest of world)

New, lower price: personal subscription for individual use only – £75; $100 including postage and handling

24-hour ordering by FAX: (0206) 549331 – USA 44 206 549331

I would like to subscribe to Journal of Cell Science at the library [ ] or individual [ ] rate.

ANNOUNCEMENT

FIRST ST. LOUIS SYMPOSIUM ON BONE METABOLISM

MOLECULAR BASIS OF BONE CELL PHYSIOLOGY:
TRANSCELLULAR SIGNALING

APRIL 30 – MAY 2, 1991

SHERATON WEST PORT INN, ST. LOUIS, MISSOURI USA

CHAIRMAN: LOUIS V. AVIOLI, M.D.

Presented by: The Division of Bone and Mineral Diseases and the Office of Continuing Medical Education at Washington University School of Medicine, and the Division of Endocrinology of the Jewish Hospital of St. Louis, Washington University Medical Center.

This conference has been designed to provide investigators in bone and mineral research with recent advances in the molecular and cellular biology of inter- and intra-cellular signaling.

The topics of the scientific sessions are: Cyclic nucleotide-based Signal Transduction; Phospholipid-based Signal Transduction; Calcium-based Signal Transduction; Phosphotyrosine-based Signal Transduction; Guanine-Nucleotide Binding Proteins; Local Factors and Matrix Protein Receptor Interaction; Steroid Hormone Signal Transduction and Trans-acting Factors.

Keynote lectures will be followed by free communications selected from the submitted abstracts.

Abstract submission deadline is February 1, 1991. For further information, please contact Loretta Giacoletto, Office of Continuing Medical Education, Washington University School of Medicine, 660 South Euclid, Box 8063, St. Louis, MO 63110, USA. Telephone: (800) 325-9862 (within continental United States), (314) 362-6893 (in Missouri and outside United States), Telefax: (314) 362-8263.
Springer for Molecular Genetics and Cell Biology

Chromatin
By K.E. van Holde. Member. National Academy of Sciences. Oregon State University, Corvallis, OR
"The author has provided a critical evaluation of a mass of data that have never before been reviewed in such detail ... It will be a marvelous springboard for a graduate-level course in eukaryotic protein-DNA interactions."
—Robert T. Simpson, National Institutes of Health
1989/497 pp./138 illus./Hardcover $98.00
(Springer Series in Molecular Biology)

Molecular Biology of Chromosome Function
Edited by K.W. Adolph, University of Minnesota Medical School, Minneapolis, MN
Here are in-depth discussions of centrally important themes in molecular biology. Coverage includes DNA replication and recombination, gene transcription, and chromosome organization. The information presented is derived from molecular genetics, cell biology, and biochemistry, as well as structural biology, including computer graphics and X-ray crystallography.
1989/431 pp./110 illus./Hardcover $98.00

Fibronectins
By R.O. Hynes, Massachusetts Institute of Technology, Cambridge, MA
One of the foremost authorities on fibronectins has provided a critical and up-to-date synthesis of the field for cell and molecular biologists. cancer researchers, and microbiologists. The book represents an extraordinary review of 3,000 literature reports and covers the diverse roles of fibronectins in such areas as wound healing, cell adhesion, cell migration, and cytoskeletal organization.
1989/546 pp./85 illus./Hardcover $129.00
(Springer Series in Molecular Biology)

Purines in Cellular Signaling
Targets for New Drugs
Edited by K.A. Jacobson, J.W. Daly, and V. Manganiello, all of the National Institutes of Health, Bethesda, MD
As research on purine derivatives moves to center stage, here is a timely review of the biology and chemistry of purines and their receptors, concentrating on adenosine receptors and effector systems, adenine nucleotide receptors and effector systems, and phosphodiesterase enzymes and inhibitors.
1990/448 pp./95 illus./Hardcover $49.00
ISBN 0-387-97244-7
