Minireview

Stimulus-response coupling: the search for intracellular calcium mediator proteins
V.L. Smith, M.A. Kaetzel, and J.R. Dedman 165–172

Articles

Domain deletion in the extracellular portion of the EGF-receptor reduces ligand binding and impairs cell surface expression

The in vitro biological effect of nerve growth factor is inhibited by synthetic peptides

Binding of insulin-like growth factor II (IGF-II) by human cation-independent mannose 6-phosphate receptor/IGF-II receptor expressed in receptor-deficient mouse L cells

Posttranscriptional changes in growth factor-inducible gene regulation caused by antiproliferative interferons

The adhesion plaque protein, talin, is phosphorylated in vivo in chicken embryo fibroblasts exposed to a tumor-promoting phorbol ester
M.C. Beckerle 227–236

Effects of phosphorylation of the neurofilament L protein on filamentous structures
S. Hisanaga, Y. Gonda, M. Inagaki, A. Ikai, and N. Hirokawa 237–248

Cover design by Patrick Maddux, San Diego, California.
