Essay
The ADF/Cofilin Proteins: Stimulus-responsive Modulators of Actin Dynamics
A. Moon and D.G. Drubin ................................................................. 1423–1431

Articles
Functional Recovery of Troponin I in a Drosophila heldup Mutant after a Second Site Mutation
Programmed Cell Death by Default in Embryonic Cells, Fibroblasts, and Cancer Cells
Y. Ishizaki, L. Cheng, A.W. Mušže, and M.C. Raff .............................. 1443–1458
Membrane Protein Retrieval from the Golgi Apparatus to the Endoplasmic Reticulum (ER): Characterization of the RER1 Gene Product as a Component Involved in ER Localization of Sec12p
K. Sato, N. Nishikawa, and A. Nakano ............................................. 1459–1477
Inhibition of a Signaling Pathway in Cardiac Muscle Cells by Active Mitogen-activated Protein Kinase Kinase
Wounding Alters Epidermal Connexin Expression and Gap Junction-mediated Intercellular Communication
J.A. Goliger and D.L. Paul ............................................................... 1491–1501
Protein Kinase C Regulates the Recruitment of Syndecan-4 into Focal Contacts
P.C. Baciu and P.F. Goetinck ............................................................. 1503–1513
Nucleolar Accumulation of Poly (A)* RNA in Heat-shocked Yeast Cells: Implication of Nucleolar Involvement in mRNA Transport
T. Tani, Robert J. Derby, Y. Hiraoka, and D.L. Spector ......................... 1515–1534
Identification of the Sequences in HMG-CoA Reductase Required for Karmellae Assembly
M.I. Parrish, C. Sengstag, J.D. Rine, and R.L. Wright ......................... 1535–1547
The Dynein Genes of Paramecium tetraurelia: The Structure and Expression of the Ciliary β and Cytoplasmic Heavy Chains
K.A. Kandl, J.D. Forney, and D.J. Asai ............................................ 1549–1562
Motor Activity and Mitotic Spindle Localization of the Drosophila Kinesin-like Protein KLP61F
N.R. Barton, A.J. Pereira, and L.S.B. Goldstein .................................. 1563–1574
Characterization of the Avian GLUT1 Glucose Transporter: Differential Regulation of GLUT1 and GLUT3 in Chicken Embryo Fibroblasts
Structural Analysis of the p62 Complex, an Assembly of O-linked Glycoproteins that Localizes Near the Central Gated Channel of the Nuclear Pore Complex
The Neurospora Organelle Motor: A Distant Relative of Conventional Kinesin with Unconventional Properties
G. Steinberg and M. Schliwa .......................................................... 1605–1618

MBC: What We’re About
Modern biological research presents unprecedented opportunities to gather data, to understand complex cellular processes and mechanisms, and to eliminate boundaries between traditional disciplines. In turn, these opportunities add to the challenges inherent in the publication of scientific results. At Molecular Biology of the Cell, we consider the reporting of science to be an integral part of research itself—a critical tool that properly belongs in the hands of scientists.

MBC operates on the principle that the sole purpose of a scientific journal should be to serve as a vehicle for effective communication among scientists. We believe that journals should be otherwise transparent—imposing no requirements for “level of excitement,” setting no trends, enforcing no arbitrary length restrictions. Rather, MBC seeks to facilitate communication among scientists by expecting full documentation of Methods and Results, by encouraging Introductions and Discussions that frame questions and interpret findings clearly (even for those outside an immediate circle of experts), and by advocating the interests of both contributors and readers through fair, prompt, and thorough review, coupled with responsible editorial adjudication and thoughtful suggestions for revision and clarification.

The criteria by which manuscripts are evaluated for Molecular Biology of the Cell are straightforward: rigor in experimental design and execution, significance in the results and interpretation, and clarity and scholarship in presentation.
