## Essay

In Memory of Harold Weintraub  
*M. Kirschner*  .......................................................... 757–758

## Articles

**Human RNA Polymerase II Subunit hsRPB7 Functions in Yeast and Influences Stress Survival and Cell Morphology**  
*V. Khazak, P.P. Sadhale, N.A. Woychik, R. Brent, and E.A. Golemis*  .......................................................... 759–775

The *Drosophila* snr1 and brm Proteins Are Related to Yeast SWI/SNF Proteins and Are Components of a Large Protein Complex  
*A.K. Dingsøl, S.J. Beek, C.M. McCallum, J.W. Tamkun, G.V. Kalpana, S.P. Goff, and M.P. Scott*  ......................... 777–791

Evidence that the MIF2 Gene of *Saccharomyces cerevisiae* Encodes a Centromere Protein with Homology to the Mammalian Centromere Protein CENP-C  
*P.B. Meluh and D. Koshyland*  ....................................... 793–807

**Sorting of Yeast α1,3 Mannosyltransferase Is Mediated by a Lumenal Domain Interaction, and a Transmembrane Domain Signal that Can Confer Clathrin-dependent Golgi Localization to a Secreted Protein**  
*T.R. Graham and V.A. Krasnow*  ...................................... 809–824

Roles for Ca\(^{2+}\) Stores Release and Two Ca\(^{2+}\) Influx Pathways in the FceRI-activated Ca\(^{2+}\) Responses of RBL-2H3 Mast Cells  
*R.J. Lee and J.M. Oliver*  ............................................... 825–839

**Induction of Carcinoma Cell Migration on Vitronectin by NF-κB-dependent Gene Expression**  

The Metalloprotease Matrilysin Is Preferentially Expressed by Epithelial Cells in a Tissue-restricted Pattern in the Mouse  
*C.L. Wilson, K.J. Heppner, L.A. Rudolph, and L.M. Matrisian*  .......................................................... 851–869

**A Role for Calmodulin in Organelle Membrane Tubulation**  
*P. de Figueiredo and W.J. Brown*  ...................................... 871–887

Phosphorylation and Localization of Kss1, a MAP Kinase of the *Saccharomyces cerevisiae* Pheromone Response Pathway  
*D. Ma, J.G. Cook, and J. Thorner*  .................................... 889–909

**VIP21-Caveolin, a Membrane Protein Constituent of the Caveolar Coat, Oligomerizes In Vivo and In Vitro**  
*S. Monier, R.G. Parton, F. Vogel, J. Behlke, A. Henske, and T.V. Kurzchalia*  .................................................. 911–927

**Insolubility and Redistribution of GPI-anchored Proteins at the Cell Surface after Detergent Treatment**  
*S. Mayor and F.R. Maxfield*  .......................................... 929–944

---

### MBC: What We’re About

Modern biological research presents unprecedented opportunities to gather data, to understand complex cellular processes and mechanisms, and to eliminate boundaries between traditional disciplines. In turn, these opportunities add to the challenges inherent in the publication of scientific results. At *Molecular Biology of the Cell*, we consider the reporting of science to be an integral part of research itself—a critical tool that properly belongs in the hands of scientists.

*MBC* operates on the principle that the sole purpose of a scientific journal should be to serve as a vehicle for effective communication among scientists. We believe that journals should be otherwise transparent—imposing no requirements for “level of excitement,” setting no trends, enforcing no arbitrary length restrictions. Rather, *MBC* seeks to facilitate communication among scientists by expecting full documentation of Methods and Results, by encouraging Introductions and Discussions that frame questions and interpret findings clearly (even for those outside an immediate circle of experts), and by advocating the interests of both contributors and readers through fair, prompt, and thorough review, coupled with responsible editorial adjudication and thoughtful suggestions for revision and clarification.

The criteria by which manuscripts are evaluated for *Molecular Biology of the Cell* are straightforward: rigor in experimental design and execution, significance in the results and interpretation, and clarity and scholarship in presentation.
